EDUCATION

University of Mississippi

Expected May, 2027

Bachelor of Science in Computer Science – Data Science Emphasis; Engineering Math Minor

GPA: 3.78

- **Affiliations:** Sally McDonnell Barksdale Honors College, ACM Coding Club
- **Awards:** UM Experiential Learning in Eastern Asia — \$9,000 Freeman Grant, Chancellor's Honor Roll Fall 2024
- **Certifications:** Career Essentials in Generative AI (Microsoft, LinkedIn) June 2024

TECHNICAL SKILLS

Languages: Python, R, Java, SQL, C++, Rust, JavaScript, TypeScript, HTML, CSS

Libraries/Frameworks: PyTorch/Keras, TensorFlow, Hugging Face Transformers, Scikit-learn, OpenCV, Pandas, NumPy, React, Flask, Tailwind CSS, Matplotlib, Seaborn

Tools/Platforms: Git, GitHub, Neo4j, Google Cloud, MongoDB, MySQL, Docker, Figma, GitLab, AWS

PROFESSIONAL EXPERIENCE

Break Through Tech

New York, NY

AI Studio Fellow

May 2026 – Present

- Selected from **4,000+** applicants nationwide for a one-year AI fellowship focused on machine learning, data science, mentorship, and career readiness.
- Completing a 9-week ML Foundations curriculum using industry-relevant tools to analyze data, build pipelines, and train and validate ML models.
- Preparing for AI Studio challenge projects with industry advisors to deliver real-world ML solutions and portfolio-ready work.

University of Mississippi – Dept. of Computer & Information Science

Oxford, MS

Teaching Assistant – CIS 356, CIS 112, & CIS 111

August 2025 – Present

- Led labs for **100+** CS and STEM students across Data Structures in Python, Computer Science I, and Computer Science II, strengthening Python, Java, OOP, algorithms, and core data structures.
- Coached students through debugging, optimization, and algorithmic reasoning, improving code clarity and problem-solving readiness.

Computer Science Tutor

January 2026 – Present

- Improved the academic performance of **50+** students by providing individualized tutoring in Python, Java, Data Structures and Algorithms, reinforcing programming fundamentals and problem-solving skills.

PotatoNet AI

Seoul, South Korea

Machine Learning Engineering Intern

June 2026 - Present

- Built a FastAPI REST service exposing a trained CNN-LSTM-Attention model that pre-predicts electrical faults one week ahead (94.7 accuracy), extracting it from a legacy Django codebase into a clean inference service within a 16-container microservices platform.
- Curated a 12,442-example training set for a GraphCodeBERT malicious-JavaScript model, deduplicating 267K scripts via SimHash LSH to prevent train/test leakage, and packaged the embedding-to-graph clustering stack (Neo4j GDS) in Docker.
- Productionized an internal LSTM inference service, migrating it to an Nginx → Gunicorn → Django stack with TLS via a reusable deployment pipeline, validated in staging with zero downtime to the live service.

RESEARCH AND PROJECT

Real-Time ASL-to-Text Recognition System | OpenCV, MediaPipe, TensorFlow, Matplotlib, scikit-learn

- Developed a Computer Vision pipeline using OpenCV and MediaPipe for robust Hand Tracking and Landmark Detection, enabling structured feature extraction from live webcam input.
- Designed and trained a Deep Learning CNN model in TensorFlow/Keras for ASL alphabet classification, achieving 97.19% accuracy on validation data.
- Optimized the system for low-latency Real-Time Inference, integrating preprocessing, model prediction, and text output into a responsive end-to-end deployment pipeline.
